

How to support compliance with GAMP 5

KERESZTESI, Kálmán

Controsys Control Engineering Ltd.

Kalman.keresztesi@controsys.hu

Application Lifecycle Management provides scalability, complete change management, and robust process control for industries which must meet compliance with safety-critical standards. These ALM based industry solutions help to achieve and prove process maturity in order to facilitate audits, shorten your products' time to market, and cut development costs.

The presentation summarises a holistic approach to ALM with integrated collaborative environment including requirement management, software development and source code management, risk management, test management by introducing the GAMP 5 template implementation of Intland's codeBeamer product. Besides that the ALM tool has predefined, ready to use templates for Medical devices, Automotive, Aviation & Defense, Embedded IoT Devices, Government, etc., as well as different software development methodologies, like Agile, Waterfall, Hybrid, Scaled Agile Framework, ALP-PLM integration.
