The first part of the presentation will introduce the importance of the maintenance software in the process industry, we will talk about the methods and devices. we will show integration solutions of the new SIMATIC PDM MS maintenance software into DCS systems, in addition we will introduce this software structure and functions. The second part of the presentation will introduce the SIMATIC PDM V9.1 software and its diagnostic functionalities. We will specifically focus on the extended valve diagnostic functions. Additionally we introduce the Valve Monitoring Application combined with the advantages of the SIMATIC PDM Maintenance station and the cloud services.
