About Nordson EFD

Nordson EFD is the world's leading precision dispensing equipment and systems manufacturer. Our engineered fluid control systems are trusted for applying controlled small amounts of adhesives, sealants, lubricants and other assembly fluids that increase productivity for nearly every industrial manufacturing process.

In the industry, Nordson EFD fluid dispensing solutions deliver smaller deposits, higher accuracy, lower dispense tolerances.

Nordson EFD systems are trusted to increase output and profitability in many applications, that include bonding, marking for pass/fail status, greasing and lubricating; potting and sealing electronics and other components; lubricating stock, dies and rolls in fin-forming applications, and more.

I'm Péter Kosaras the application specialist for the SEE region. We have also local presence in Romania and Bulgaria. I help for customer to find the bottleneck of the fluid dispensing process. Our team can do testing for customers on site or in the lab, to find the most suitable dispensing solution. We work together with automation integrators and deliver solutions to build our systems in to the end customer's production lines
