i-Automation: Omron's Integrated, Intelligent, Interactive Automation systems

As the average lifecycle of the products are getting shorter, manufacturers all over the world facing more and more challenges dealing with low volume and high mix production. Although the technological background is available there is still a question of how to integrate it while staying flexible and profitable. We would like to show you how Omron's Industrial Automation portfolio from simple control solutions to advanced inspection systems and collaborative robots can help your company to achieve your goals.

Daniel Szabo is a Field application engineer working over 3 years at Omron, mainly focusing on industrial and collaborative robotics especially with automated mobile robots. During University studies he worked as an intern at Omron and worked closely on real applications with machine builders and system integrator companies. After a few years of experience, he started working full time and specializing more and more in robotics.
