Omron LD mobile robot demonstration

Collaborative mobile robots are one of the many key developments that can enable manufacturers to achieve flexible and more efficient logistic automatization. In this workshop we will present you the basic operation of a Omron LD mobile robot and the capabilities of our fleet management system.

Daniel Szabo is a Field application engineer working over 3 years at Omron, mainly focusing on industrial and collaborative robotics especially with automated mobile robots. During University studies he worked as an intern at Omron and worked closely on real applications with machine builders and system integrator companies. After a few years of experience, he started working full time and specializing more and more in robotics.
