Cutting Edge OT Cyber Security Solution For Critical Infrastructure.

Cyber Security in industrial networks and critical infrastructure is the key element for safe and reliable operations. It is extremely important for industrial enterprise to make sure that all the processes and infrastructure comply with international regulations on cyber security. In our ever changing world, where new threats and risk appear every day, it is important for any industrial organization to be in control of OT assets . Constant monitoring and supervising of critical infrastructure is the crucial for any industry. Any industrial site has numerous devices and technologies that work in parallel. Supervision of numerous assets provides safeguards for reliable operations. Industrial facilities face complex operation scenarios, due to the sheer number of components. In this case, risk assessment – simulation of breach attempts and using multiple models provides crucial information about how to enhance and improve industrial security. Industrial facilities are not static, but dynamic with constant addition of new components and upgrades. In that sense, supervising and monitoring ever changing industrial network is critically important.
