Introducing MES in a pharmaceutical production facility

Richter Gedeon has introduced recently a fully digital MES system on one of the production areas. The presentation is about the specification, design and installation of the MES as well as the qualification steps to complete next to the technical challenges of a complex application like introduction of a Manufacturing Execution System.

Several process control, monitoring, MES projects had been delivered by Kalman and his application team over the past decades mostly in food, chemical, pharmaceutical and biotechnological production facilities in Hungary as well as on abroad. Controsys has also gained deep knowledge on validation of applications for regulated industries using fully digital Application Lifecycle Management tools.
