OT-IT Evolution: Applying Viable Technical Solutions for Production in a Corporate Environment

This presentation would consist of two parts:

Firstly, a technical overview of how viable technical solutions can be applied for production in a corporate environment. This includes addressing separation and its IT implications.

Secondly, I aim to delve into a topic that, in my opinion, has received much less spotlight until now. We are making significant efforts to examine possible attacks on OT systems, investigate data traffic within devices, log and analyze it.
