Controsys Control Engineering Ltd.

Peter.Paziczki@controsys.hu

Péter Paziczki is a Sales Engineer with a background in Software Development, Data Analytics, Applied Machine Learning Solutions and Project Management.
He is very much interested in Industrial Digitalization, Process Automation and has deep knowledge of AVEVA (WonderWare, Asset Performance Management), Redlion and Softing Products.

Beyond SCADA – Energy Management Solution

An organization with high energy consumption, producing several different products, wanted to have a better understanding and tighter control of their energy consumption. They wanted to understand how efficient their operations are on a product, equipment or even shift level. In addition to that they needed a solution where Colleagues can have a self-service access to data and BI visualization tools, so they can do ad-hoc but deep analysis, trouble-shooting or share dashboard with their coworkers.

Valuable data (process data, time series data, inventory, energy consumption, ambient parameters, etc.) are stored in separate data silos and no one has access to analyze them in relation to each other. Real value can be unlocked when people with the right tools have access to their data.
