Resource and Energy Management Solutions in Industrial Environment

Energy Management is getting more and more important nowadays due to the rising prices of energy.

A solution with the characteristics may help the user:

- Cost reduction through continuous monitoring, analysis and evaluation of your energy data*
- Possibility to reduce CO₂ emissions as a contribution to environmental protection*
- Creation of transparency through identification of weak points and causes of fluctuating process quality*
- Reduction of personnel expenses through standardized reporting*
- Simple operability with high functionality at the same time*
- ISO 50001 certification*
- automatic reporting and the recording of production data*

In my presentation I would like to give a high-level overview on solving similar type of projects referring also to possible difficulties and pitfalls that may arise during the projects by sharing practical experiences.
